¹ All lighting measures must be DLC or ENERGY STAR certified

² Homes must be heated with electric heat to qualify

³ All accessible duct joints, seams, connections, and penetrations must be sealed with approved mastics prior to duct insulation

⁴ Fuel switching not permitted. Ductless Mini-splits must be new, ENERGY STAR certified, and meet the minimum efficiency requirements of SEER ≥ 16 and HSPF ≥ 10

⁵ Attic insulation must meet the R-38 building code

⁶ Blower door test not required. Contractors should target the highest sources of air leakage first, such as major penetrations in the attic, basement, or crawlspace.
